✓ OBJECTIVE

Motivated Junior Software Developer with 6 months experience developing responsive web applications using technologies such as Python, Flask, PostgreSQL, JavaScript, React, Redux, and object-oriented methodologies. Seeking to use proven skills to further my passion for learning, communicate concisely, and to create applications among any team and become this best version of myself.

📁 PROJECTS

Cripsi, a Restaurant Recipe App

11/2022 – 12/2022

Capstone

- Designed a recipe search application that implements API's to retrieve, store, and display recipe information using multiple Flask routes, and perform CRUD operations.
- Developed with Flask framework, python-backend, used the Jinja2 templating engine to display HTML in conjunction with the Bootstrap5 library for a better user experience.

little library, a fullstack library app

10/2022 – 11/2022

Fullstack app using Flask and React

- Implemented a Flask-backend to create an API, and tested routes in Postman.
- Generated unique user token after user authentication during sign-up and login to be used in the frontend.
- Designed React frontend for seamless user experience.

Museum Art, ARTIC API

10/2022

Javascript API

- Developed a web application using Vanilla JavaScript and The Chicago Art Institute public API.
- HTTP GET, POST methods were implemented for API calls to parse and manipulate the returned data.

🎓 EDUCATION

Full Stack Web Development

06/2022 – present

Coding Temple

Full stack web development course with focuses on Python, Flask, SQL, JavaScript, and React.

Responsive Web Design

present

Codecademy

Biochemistry, B.S.

2019 – present

University of Massachusetts Boston

🧠 SKILLS

Python

SQL

Flask

Git

React

Javascript

HTML

CSS

Firebase

Anaconda

Bootstrap

Postman

Typscript

Security Clearance
